*Reliable Software Solutions*

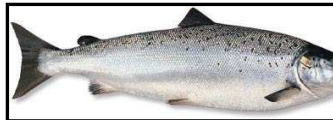

## Meat Processing

The Minotaur Business System is an effective tool for primary and secondary meat processors. Minotaur includes several industry specific requirements that meat processors need. Minotaur's production module can accommodate regular food assembly as well as disassembly allowing a primal or larger cut to be broken out into its component pieces. More importantly, Minotaur allows you to break down a larger cut by percentage but apportion the costs of those cuts differently from the percentage yield. For example, if a disassembly process produced steaks as well as other cuts, you may wish to apportion more of the cost to the higher value steak.

In conjunction with Minotaur's Inventory module, there are a number of useful reports available to track inventory throughout your operation. These include; Inventory Count and historical transaction reports, various Lot Number reports; including expired lots and lot tracing for product recalls, Inventory and Production Requirements reports and a Cost Waste Report for yield analysis. The Minotaur Business System can provide an efficient software solution to assist with the meat industries unique requirements.

### Highlights

- Ability to disassemble a primal into a number of different cuts
- Item Substitution Report
- Production Run by Raw Material
- Production Weight Entry
- Yield analysis
- Incorporate labour into cost of items

### Additional Features

- Shipping and invoicing transactions automatically update Accounts Receivable, Inventory stock levels, and the General Ledger.
- Handles partial shipments with automatic backorder capabilities.
- Unlimited line items and user comments per order, shipment, and invoice. Data entered on orders automatically flows through to corresponding shipments and invoices.
- Handling of price lists, customer specific pricing and date based pricing are standard. Other pricing configurations also available.
- Credit Information can be displayed during order entry and invoicing. Customers can be assigned to groups to automatically determine their handling including Credit Hold Lock, which prevents shipments until approved for release.
- Individual pick slips with bar codes can be produced at order entry. Batch pick slips can be produced based on order or due date. Documents can be sent to print in the appropriate warehouse location.
- Customers can be assigned to routes. Use route reports and rerouting features to assist with managing orders and deliveries.
- Supports customers with central billing and multiple ship to locations.
- Rebate marketing agreements with retailers can be tracked by accrual or on-invoice deductions—using Minotaur's Retail Marketing Program Module; simplifying the management of these programs.
- Retail Sales? — Using Minotaur's Point Of Sale module, you can scan bar codes and process retail orders quickly and easily.
