

# Minotaur Software Ltd.

reliable software solutions since 1985

## Product Development

Managing new product development can be a challenge. Often production and R&D have different needs and from an operations standpoint – things need to be kept separate. Minotaur Software's product development module was designed to handle the unique needs of development without impacting mainstream production.

### Highlights

- Keep new/sample raw materials and finished goods separate from mainstream production.
- Track multiple versions of formulae.
- Allow developers to use product development raw materials in addition to existing inventoried raw materials when developing formulae.
- Calculate the cost associated with each formulation.
- Print a work order for a sample batch and run a pilot production run.
- Easily transfer an accepted formula into mainstream production.

### Additional Features

- When used with the manufacturing module, the formula for new products can be based on an existing production item formula.
- Raw material adjustments can be entered and the system will recalculate the % weight of each input.
- Line items can include batch instructions.
- Steps can be assigned to each line item. If lines are added or deleted, the user can re-sort the line items based on the step sequence.
- When combined with Minotaur's timesheet abilities, you could track the amount of time being spent on each development project.

MPF - FORMULATION WORK SHEET					
Project Code:	MUF101	Desc.:	Muffins 101		
Version:	001	Total %:	100		
Batch Size:	10	Batch Cost:	7.74	Unit Cost:	0.77
<input type="button" value="Save"/>		<input type="button" value="Cost"/>		<input type="button" value="Pilot"/>	
<input type="button" value="Sort"/>					
Step	Raw Mat.	Description	Weight %	Qty.	
	EGGS	eggs	12	1200.000	
	*	whip eggs		0.000	
	01234	Sugar	14	1400.000	
	FLOUR	Flour	54	5400.000	
	01500A	Bulk Rasberries Alberta	20	2000.000	

Existing formula screen based on % weight. This can be modified based on your requirements.
