

# Minotaur Software Ltd.

*Reliable Software Solutions*

## Recyclers

The Minotaur Business System is an effective tool for chemical recyclers as our system allows you to do both assembling manufacturing (building up of products) and disassembly manufacturing (breaking down of products). More importantly, Minotaur allows you to break down products by a typical yield percentage but apportion the costs of those products differently from the percentage breakdown. In other words, we recognize that some outputs are worth more than others.

In conjunction with Minotaur's Inventory module, there are a number of useful reports available to track inventory throughout your operation. These include; Inventory Count and historical transaction reports, various Lot Number reports if your products will be sold to produce food grade packaging; including lot tracing for product recalls, Inventory and Production Requirements reports and Cost Waste Reports for yield analysis. The Minotaur Business System can provide a complete and efficient software solution to assist with the recycling industries unique requirements. Manufacturing can be controlled on the production floor with our touch screen production module which connects your weigh scales and labeling equipment for catch weight recording of work in process and finished goods for very accurate yield reporting.

### Highlights

- Ability to disassemble inputs into a number of different outputs
- Item Substitution Report and built in unit conversion
- Detailed Yield analysis
- Incorporate labour into cost of items
- Quality Control product specification tracking.
- Wireless warehouse functionality.

### Additional Features

- Multi-level bill of materials allows you to track work in progress and perform cost and yield analysis at the various stages.
- Features to assist production of batches, followed by filling of varying container sizes.
- Tracks product specifications including identifying acceptable lots for those customers with identified product tolerances.
- Certificate of Analysis produced for each shipment based on specifications of the lot being shipped.
- Transportation of Dangerous Goods documents, Material Safety Data Sheets and truck placards can be associated with applicable items.
- Attribute system for tracking user defined item characteristics. Eg. Flammable, corrosive, etc.
- Allows generation of barcode labels. Wireless scanners can be used to ship and receive barcoded items live in the system.
- Rebate marketing agreements can be tracked by accrual or on-invoice deductions—using Minotaur's Marketing Program Module; simplifying the management of these programs.
- Unit Conversion is built-in which allows calculation factors to convert specified quantities including specific gravity calculations.
- Equipment tracking. Units such as dispensers, etc., can be rented or loaned to customers. System can inform user when return or service of the equipment is required using serial numbers.
- Fully integrated financial modules for a complete business management solution
- Minotaur has more than 23 years of experience helping mid-sized chemical manufacturers manage their businesses!
