

Minotaur Software Ltd.

Reliable Software Solutions

Beverage Manufacturing and Distribution

The Minotaur Business System is a powerful tool for beverage companies. Our wide experience in the Beverage Manufacturing and Distribution industry has enabled us to create a powerful, comprehensive system to handle the many unique requirements of this industry. Whether it is varying units of measure, lot control, quality control or customer product specifications, rebate marketing programs with retailers, direct to store delivery and route-based distribution, cooler or dispensing equipment tracking, etc.; Minotaur has the features to simplify the complex and unique requirements of the beverage industry. We also have experience with alcohol production and the various tracking and reporting required.

Highlights

- Barcode capabilities
- Automatic unit of measure conversions including Brix
- EDI capabilities
- Full lot control traceability for HACCP
- Product specifications tracking
- Batch and co-product manufacturing

Additional Features

- Retailer rebates can be accrued automatically, based on quantity or dollar sales.
- Price Deals, involving start and end dates, assigned by Customer Group or specific customer, by product or product category.
- Allows generation of barcode labels, and tracking product by barcode. Scanners can be used in warehouse management.
- EDI capabilities allow system to automatically receive customer orders, and transmit shipping notices and invoices. We can also transmit Purchase Orders to suppliers.
- Direct to Store delivery features, including Route Sheet generation, pre-invoicing, truck stock, etc.
- Order Templates can be preset for customers
- Handles variable quantity production and distribution, including detailed fractional quantities.
- Flexibility to handle ingredient substitutions.
- Quality control specifications can be tied to the production run and lot number. Certificates of analysis can be produced.
- Able to handle sales by skid or case, mixed cases, etc.
- Ability to track co-packing, including your co-packers and companies you co-pack for.
- Includes features to easily handle re-labeling process.
- Can track both finished goods and raw materials by Lot.
- System can be run on an Actual Cost by Lot method, including on Sales Invoice, allowing accurate costing and profit reporting.
- Historical reporting by Lot, to assist product recall.
- Product Expiry reporting.
- Time based Lot Control to assist in usage of the right product at the right time
- Handles non-sellable Locations, where product can exist yet not be available for sale, such as QC area, lab locations, etc.
- Built-in calculation factors to convert specified measurements on various transactions.
- System handles Specific Gravity and Brix Conversion calculations.
- Equipment tracking. Units such as dispensers, etc., can be rented or loaned to customers
