*Reliable Software Solutions*

## Inventory

The Minotaur Inventory module keeps accurate track of all the items you deal with, whether it's finished goods, work in progress or raw materials. The item file is comprehensive, storing all the information you need about each item including batch size, max/min levels by location, attributes, supplier lead times and alternate units of measure. All transactions and costs are recorded in detail, allowing item histories and inventory valuations at any time. When used in conjunction with the order entry, lot control and manufacturing modules, you achieve unprecedented tracking and control of your inventory. The result, lower inventory carrying costs, lower overhead, increased customer service and order fulfillment, increased cash flow, and higher profitability.

### Highlights

- Barcoding Capabilities
- Attributes System
- Method of costing determined on an item level
- Automatic landed cost calculation
- Built in Unit Conversion capabilities
- Inventory Requirements and Historical Reporting

### Additional Features

- System can track unlimited Inventory Locations and Bins within Locations.
- Barcodes can be read and interpreted by the system and used to facilitate the shipping, receiving and production processes.
- When combined with the Lot Control Module, your system will provide full historical reporting by Lot Number and comprehensive lot trace reporting to assist with product recalls.
- Quality control and customer product specifications tracking including preparation of certificates of analysis.
- Shelf life and product expiry reporting.
- Attributes system will enable you to classify and track additional information on your items. Fields can contain date, numeric, text and yes/no information. ie. Allergens, kosher/non kosher, hazardous material classifications, certificate of analysis required, tariff classification no., etc. Useful in reporting and analysis, document preparation, formula development, etc.
- Full historical reporting on items, displaying customer invoices, supplier bills, adjustments, and production.
- Supports price lists, customer specific pricing and date based pricing when used with the Order Entry/Invoicing Module. Other pricing configurations are also available.
- Multiple Item Updater allows mass changing of item file information for a range of items
- Mass price changing of selling price or supplier price of items, by percentage or flat rate. Commodity driven pricing option also available.
- Receive partial shipments from suppliers, with automatic back-order (if using Purchasing module).
- Warns user of price changes when entering supplier bills, and automatically updates price on file if new price is accepted.
- Costing method of actual, average or standard can be selected on an item level
- Calculates landed cost automatically. Calculation and cost distribution method are user defined. ie. incorporate freight, duty, handling charges, etc.
- Reorder List advises of items and quantities to purchase or produce, (if using Purchasing and Order Entry/Invoicing modules), including allowing for min/max levels .
